

## *Lonsdalea quercina* subsp. *populi*

(Poplar bark canker)

### What does it attack?

It attacks adult poplars.

### How to identify it?

On the trunk, longitudinal cracks, white foamy substances and black liquid substances can be observed (**Fig. 1**).

### What damage does it cause?

Causes premature leaf drop, weakens the tree and impedes its growth, even causing death (**Fig. 2**).

### When to see it?

Once this disease has begun to develop.
